

Your Remote Students
Securely managed.
Globally connected.

ABOUT STRATUSX

Maintaining high productivity outside the office was always our challenge. We needed the office IT 'perimeter' to extend to our on-the-road team. The solution dawned on us and StratusX was created. Headquartered in NYC with our R&D in Tel Aviv, we're a collection of passionate cell phone geeks, orthogonal thinkers and obsessive engineers who always find a better way to get things done.

Our solutions cover Enterprise WFH, Education & Virtual Classrooms and International Business Travel.

EDUCATION - THE VIRTUAL CLASSROOM

These days, many students learn from home in virtual classrooms. StratusX provides students and teachers with connectivity and support, enabling reliable and high-speed internet, restricting access to inappropriate content, while ensuring that their connections are secure. We also provide 24/7 support for all their connectivity needs.

WHY STRATUSX

CLOUD MANAGED

Your IT team needs support to regain control over your remote employees' connectivity. 3rd party ISPs, unconfigured gateways, vulnerable & varied routers, and unauthorized shared access, all lead to decreased productivity and chaos for your IT team. With StratusX's cloud management system, centrally control your employees' connectivity, wherever they go.

PRIVATE & SECURE

Home gateways and routers are unmanaged, unpatched, shared with others and notoriously vulnerable. StratusX combines a 4G WiFi mobile hotspot, a router, a firewall and a variable MFA in one low profile. StratusX verifies and authorizes everyone who attempts to access your corporate network, before enabling their connection.

POCKET-SIZED & PERSONAL

A personal, independent, on-demand connection to the Internet and to the company network for all authorized devices. Lightweight and portable, it ensures total separation from your employees' vulnerable home networks. StratusX is your very own personal gateway in a box.

CELLULAR ROUTER

StratusX's vSIM™ technology solves the operational complexities of deploying large scale global cellular service for enterprises. The StratusX platform automates the manual processes inherent in legacy provisioning and management by dynamically and automatically reprogramming the SIM card remotely, in real-time.

TAILORED

Tailor every aspect to perfectly mirror your organization's needs and threats. Configure, monitor and control all devices, all connectivity, manage all parameters, and dynamically adjust service levels from a central console, in real time. Employee connectivity on your terms.
